

RCLF SITE FURNISHINGS STANDARD LID OPTIONS

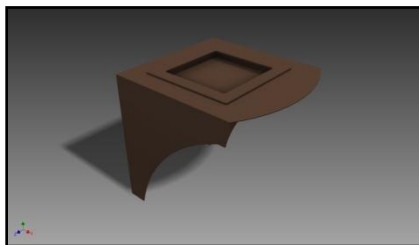

Flat Lid (-FL) →

The Flat Lid is constructed from laser-cut solid sheet metal and typically rests on tabs welded within the receptacle. Inquire within about our Flat Lid Decals.

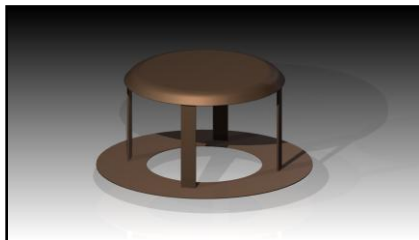

← **Recycling Lid (-RL)**

The Recycling lid offers a round opening for easy deposit of bottles and aluminum. This lid is only compatible with our circular receptacles. Call for custom recycling lid options.

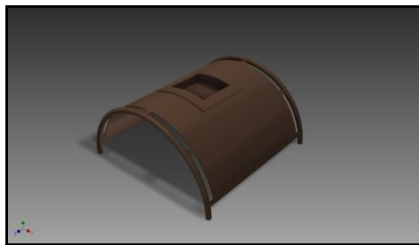

Chute Lid (-CL) →

Available with or without an ash tray, the Chute Lid can be added to any one of RCLF's receptacles to keep trash in and the elements out.

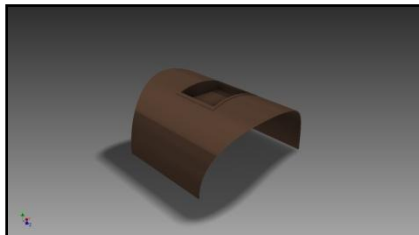

← **Dome Lid 1 (-DL1)**

The DL1 is a spun dome lid that has become a classic in receptacle coverings. Compatible with most of RCLF's standard receptacles and available with an optional ash tray, the DL1 is a perfect choice!

Dome Lid 2 (-DL2) →

Option 2, in our line of dome lids, combines 11 GA sheet metal and 3/4" round bar stock to create an easy lid that completes any receptacle. Option for drop in ash tray is available.

← **Dome Lid 3 (-DL3)**

Similar in functionality to the DL2, the third option in our line of dome lids captures a true bonnet style and can include a drop in ash tray.
